June 2008

Streck products on display at industry expos

Drug Information Association Annual Meeting, AACC 2008 Clinical Lab Expo

Omaha, NE - Streck, Inc., a medical device manufacturing company and the technology leader in the stabilization of cells, will be exhibiting at the Drug Information Association Annual Meeting June 22-25 at the Boston Convention and Exhibition Center and at the 2008 Clinical Lab Expo July 29 - 31 at the Washington DC Convention Center.

Streck's patented cell preservative makes possible a line of direct-draw blood collection tubes which maintain sample integrity thus ensuring accurate and reliable data. This new line of tubes will be the focus at DIA.

Core products - hematology, chemistry and flow cytometry controls and reagents - along with the new line of blood collection tubes will be featured at the Clinical Lab Expo.

After introducing the first three- and five-part differential controls, Streck developed the first reticulocyte control and offers patent-protected five-part differential controls plus reticulocytes and nucleated red blood cells. Other products include automated Erythrocyte Sedimentation Rate analyzers, point of care chemistry controls and unique quality control devices.

Visit us at DIA, booth 1931, and AACC, booth 1938 to learn more about these innovative Streck products.
